

Seamlessly integrated tracking of location, condition & security.

JIT automotive logistics: ParcelLive is the complete solution.

ParcelLive is a real-time parcel tracking service that enables you to track the location, condition and security of your component and vehicle shipments from almost anywhere in the world.

Increasing reliance on parts from multiple suppliers and increasingly dispersed vendors can test resilience and undermine the benefits of the JIT automotive and effect decision makers in the supply-chain:

- **Vehicle manufacturer logistics professionals**
- **Component suppliers**
- **3rd party logistics providers**

ParcelLive's service means that you can now collect data from the whole delivery supply-chain and receive real-time alerts or tracking audits that alert you to exceptional events – like when a shipment has been dropped or tilted, has been delayed at port or if it has been tampered with.

All of the information you need:

GPS location: provides you with pinpoint accurate location data, from almost anywhere in the world;

Temperature: identifies the range of temperatures that the shipment has been exposed to throughout the supply-chain;

Impact: tells you in real-time (or retrospectively) if your shipment has been dropped or hit;

Tilt: notifies you in real-time (or retrospectively) if your shipment has been subjected to tilting;

Humidity: identifies the range of humidity that the shipment has been exposed to;

Shipment breaches: are triggered by light sensing events such as a parcel being opened.

Seamlessly integrated tracking of location, condition & security.

How ParceLive works

It's as easy as 1, 2, 3 ...

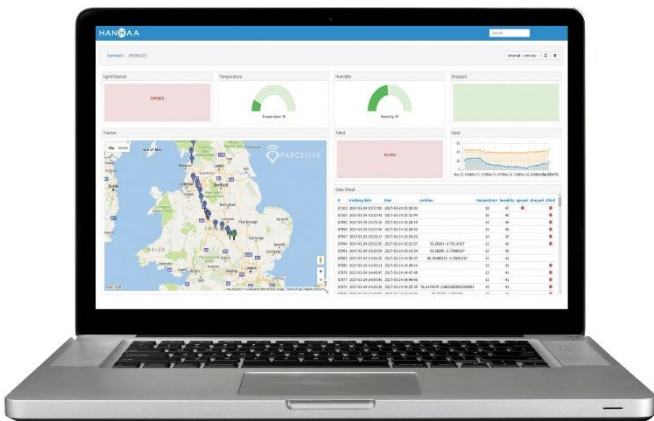

You or your shipper receive fresh ParceLive trackers and insert them into shipments ...

... the shipment is now live on the ParceLive network and will report-back on its location, condition and security from almost anywhere in the world ...

... the person receiving your shipment places the tracker in the post (no need for stamps or envelopes) to send it back to our service centre to be reset, charged and made ready for its next journey.
